1. Food Delivery Platform (Full Stack)

Duration: Jan 2026 – Mar 2026 **Type:** Personal Project

A food ordering platform connecting customers, restaurants, and delivery partners. Built to practice designing a multi-service architecture end to end.

Architecture components:

- Client App (React) — browsing, cart, order tracking
- API Server (Spring Boot) — order orchestration and business logic
- Authentication Service — JWT-based login/signup
- Database (MySQL) — restaurants, menus, orders, users
- Payment Gateway — mock integration simulating a checkout flow
- Notification Service — order-status email/SMS simulation
- Admin Dashboard — restaurant and order management view

My contributions:

- Designed the database schema (8 tables) and wrote the REST API layer (22 endpoints).
- Implemented JWT authentication and role-based route protection.
- Built the React cart and checkout flow, including basic form validation.
- Wrote 30+ unit tests covering the order and payment modules.

Tech stack: React, Spring Boot, MySQL, JWT, REST, Postman, Git

2. Student Result Management System

Duration: Aug 2024 – Nov 2024 **Type:** College Project (Team of 3)

A desktop application for a college to manage student enrollment, attendance, and grade computation, replacing a spreadsheet-based process.

- Built using core Java (Swing UI) with a MySQL backend.
- Implemented role-based login for Admin, Faculty, and Student.
- Automated GPA and grade-sheet computation for a batch of 200+ students.
- Wrote the reporting module that exports grade sheets to PDF.

Tech stack: Java, Swing, MySQL, JDBC

3. Personal Portfolio Website

Duration: 2023 **Type:** Personal Project

A responsive portfolio site listing projects, certifications, and blog notes on topics she is learning.

- Built using HTML, CSS, and vanilla JavaScript, deployed via GitHub Pages.
- Added a small blog section written in Markdown to document DSA learning notes.
