TECHNICAL SKILLS — DETAILED BREAKDOWN

Riya Sharma

Programming Languages

- Java — Intermediate/Advanced. Core Java, OOP, Collections. Used in internship and 2 major projects.
- Python — Intermediate. Used for scripting and a couple of data-analysis assignments.
- SQL — Intermediate. Comfortable with joins, subqueries, indexing basics.
- JavaScript — Intermediate. ES6+, used for React frontend work.

Frameworks & Libraries

- Spring Boot — built REST APIs, used Spring Data JPA and Spring Security basics.
- React — built two frontend applications, comfortable with hooks and state management.
- Node.js / Express — built small backend prototypes; not used at internship scale.

Databases

- MySQL — schema design, indexing basics, joins, transactions.
- MongoDB — used briefly in a hackathon project.

Tools & Practices

- Git & GitHub — daily use, comfortable with branching and pull requests.
- Postman — used for API testing during internship and projects.
- JUnit — wrote unit tests for backend modules during internship.
- Basic CI concepts — helped set up a GitHub Actions check for pull requests.

Areas Still Growing

- Multithreading and concurrency — theoretical knowledge, limited hands-on practice.
- System design at scale — familiar with basic concepts, no large-system experience yet.
- Docker/containers — has not used in a real project yet.
- Automated testing beyond unit tests (integration/E2E) — limited exposure.
